ENGLISH VERSION

INTRODUCTION

The lateral magnetic magazine pouch is one of our most traditional and well-known products, principally because it is extremely resistant and durable, and is suitable for all types of magazine. Follow the steps in this manual in order to get the most out of your new product.

For your own safety, follow the instructions carefully.

LATERAL MAGNETIC MAGAZINE POUCH PARTS

1. magnet
2. hanger
3. velcro
4. 3mm Allen key

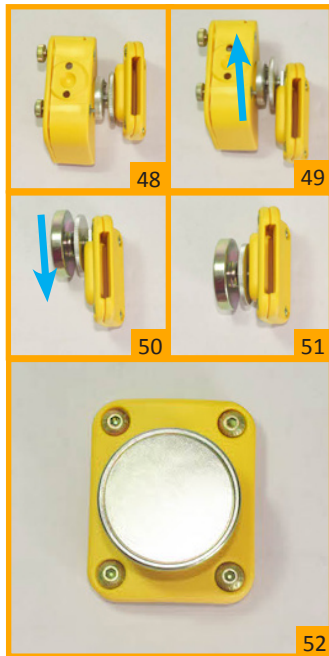

1. FIXING THE MAG POUCH ON THE HANGER AND ADJUSTING THE HEIGHT

ATTENTION! You are dealing with a strong, powerful magnet. Keep it away from electronic and metallic devices. If you have more than one magnet, ensure that they are not close to each other, and that they are not getting stuck together eventually hurting your hand.

If you have already positioned your other magazine hangers on your belt, you can exchange magazines without having to reposition the hangers already fixed.

To substitute one magazine for another on the hangers on the belt, release the tightening disc behind the magazine pouch until it gets loose. Then slide it up to remove it (photo 49), and insert another by sliding it downwards (photo 50).

Tighten the tightening disc again to finish. //

CONGRATULATIONS!

Your lateral magnetic magazine pouch
is now ready for use.
